

HR Leave Management System

Group 2: Aya, Moamen, Gihad

The Problem with Traditional Leave Management

Before

Manual requests, spreadsheets, and email chains create delays and mistakes.

After

Employees submit online, managers approve digitally, and balances update automatically.

Three Roles, One Platform

Employee

- Submit leave requests
- View leave balance & history
- Track request status in real time

Manager

- Review and approve or reject requests
- Add comments to requests
- Monitor department leave activity

Administrator

- Manage employees and departments
- Configure leave types and balances
- Access reports and dashboard stats

Employee Management

All employee records live in one centralized place, making it easy to keep information accurate and up to date. Administrators can manage staff data and leave entitlements from a single system.

→ Employees access their own records anytime

→ Leave balances are visible without contacting HR

→ Reduces admin workload and increases transparency

Leave Lifecycle — End to End

Public Holiday Integration

The system automatically retrieves official public holidays from an external holiday service, keeping the calendar up to date year-round.

Official holidays are excluded from leave duration calculations

Holiday data is cached locally for fast, reliable performance

Ensures accurate leave balance updates every time

Dashboard & Reports

100%

Employee Visibility

Total employees and departments tracked centrally

3

Request States

Pending, approved, and rejected requests monitored live

1

Unified Platform

All leave history and department usage in one place

Automatic Notifications Keep Everyone Informed

01

Employee notified when a request is **approved** with a comment.

02

Employee notified when a request is **rejected** with a comment.

Why the HRMS Makes a Difference

Less Paperwork

Eliminates manual forms and spreadsheets, freeing HR time for strategic work.

Faster Approvals

Digital workflows speed up request routing and manager decisions.

Fewer Errors

Automated leave calculations minimize human error in balances and approvals.

Better Decisions

Reports and dashboards provide data to support workforce planning.
